

Stade de Tourbillon

Within a relatively short period of time, the power distribution system at the Stade de Tourbillon in Sion was brought up to UEFA standards; paving the way for the joy of football to continue.

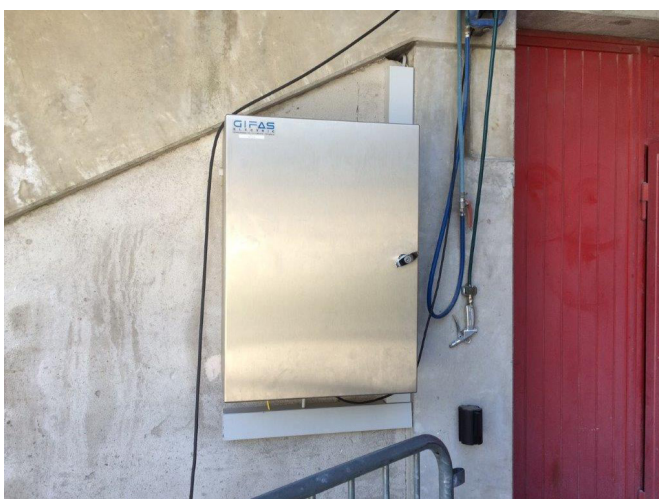

Customer/installation engineer:	FC Sion
Requirement:	The Stade Tourbillon is not UEFA-compliant
Solution:	GIFAS surface mounted distributors, individually manufactured
Article:	Large enclosure, INOX surface mounted distributor, INOX recessed mounted distributor
Quantity:	1 x large enclosure, 5x INOX surface mounted distributors, 5x INOX recessed mounted distributors
Equipment:	On request
Areas of application:	Football stadium

Starting situation

FC Sion were unexpected victors in the Swiss Cup, therefore gaining a place in the Europa League competition. However, the Stade Tourbillon, where FC Sion play their home matches, is not equipped to UEFA's standards and must therefore undergo work. Various power distribution systems needed to be created and installed within the stadium in just one month.

Customer benefits

- Power distribution systems according to customer specifications
- The large enclosure consists of 1x energy measurement system, 1x socket security system, 1x T23 socket up to CEE 125A, and 3x boxes for rack application (communication, TV, illumination)
