

## testers for various places of action

Testers for industry and trade, clinics, hospitals or other institutions such as railway enterprises, municipal or national acting establishments are used daily from content operators.

We have the ability to accommodate to individual wishes and requirements. In collaboration with our sales consultants, we develop problem solutions and therefore products, which are custom-made to the needs of our clients.

All our testing units are of course built by the latest regulations and norms. In this product field, high quality consciousness and diligence are a must: the testing and checking of handheld units or other electrical working funds protects from personal- and material damages.

The latest norms (e.g. DIN/VDE 701/702) will be implemented immediately in our appliances. Thereby the sky is the limit: casings made of hard rubber, aluminium or plastics, mobile or constant installed, in different colours and measures: **We will be glad to advise you!**

You will find some already delivered units in the following summary.

**Client:** Cantonal hospital, CH –Baden AG

Mobile testing unit in an inconspicuous grey / blue. Usable everywhere and flexible – with drawer-block for a clean deposition of the tools.

V 1212
